Has technology changed education for the better?

People around the world have been struggling with COVID-19 for the long time in 2020.

コメントの追加 [2]: omit

It is said that this is the worst crisis in the period after the Second World War.

コメントの追加 [3]: in the postwar period

Although that's true, we got/ have gotten a lot of merit due to the hard time.

コメントの追加 [4]: ここで、イエスかノーを言う。

Ex: Although students are facing difficulties learning face to face, technology can help them learning at home. It is sure that technology has changed education for the better for the following the three reasons.

First of all, Japan had to switch to online meeting at work and education for the students
Japanese students have no choice but study at home, using computers.

コメントの追加 [5]: Education に特化したサポーティングアイディアを言う。Japanese people

2) It was imperative that we should act at once.

コメントの追加 [6]: Act to improve the educational environment immediately

1) ~~Before~~ first-wave our online system was really behind than the other developed countries.

コメントの追加 [7]: However, the online system in education is ~

3) Owing to those situation, it made us big progress.

コメントの追加 [8]: Through this experience, students in Japan can learn under better situations with advanced technology like those in other nations.

Secondly, ~~the~~ technology brings a large amount of imformation, so we can get anything

コメントの追加 [9]: the internet

from them at home. Especially for students, they are able to take them by the internet very easily and quickly.

コメントの追加 [10]: ピリオド Students can gather whatever they need at home.

Besides it is good circomstances for nonattendance student at school. これを Finally にして 2 回目エッセイにチャレンジしてみましょう！

コメントの追加 [11]: For example, if they find global issues unfamiliar with, they can just click a mouse to search several explanations by experts around the world. Various opinions encourage them to study more. They do not need to ask their parents or teachers anymore.

On the other side, there are a lot of demeirt to rely on it.
Moving to online classes would make them uncomfortable in learning because there is an invisible barrier between the teacher and the student.
Also, young people doesn't want to look up on a subject or materials by studing themselves.
They have always used a smart phone in every moment and enjoyed with online aplication or games.
Yes or No のどちらかサイドで一貫して書く。
As a result, the technology has changed education both side.
Of course, I agree to merit one but we need to think about how we use the technology for the better in the future.

☆だんだん、良くなってきていますね👍
　Yes, No どちらの方が書きやすいかを即座に決めることが大事です。
　一貫した側から３サポーティングアイディアを書くと、英検ではスコアアップになります。
　同じ表現を繰り返さない、ということが身についてきましたね。素晴らしい！
　教養ある主張になりますよね。
　もう一回、改善点を参考に書いて、送ってください。オンラインクラスでフォローします。
See you soon!

Has technology changed education for the better?

An increasing number of people are benefiting in education /because of the advent of technology such as computers.   It has changed education for the better. There are three reasons which support this idea.

Firstly, computers make it easier to find a lot of information at home as well as at school. Students do not need to go to the library or ask teachers / if they come across questions. Now, they can gather information to study just / by clicking the mouse. It is not necessary to search information for a long period of time.   As a result, computers encourage them to be curious about a variety of things and study more.

Secondly, the iPhone plays a **significant** role in education. The small device is so easy to use /and it is at the same time / equipped with different kinds of applications which could be used anytime, anywhere. Thus, they can use their spare time effectively.   For example, it is useful for us / especially in memorizing English words, reading and listening to an English application during commuting time.

Finally, the on-line education system provides students with a broader opportunity.
We had education disparities between students in urban and rural areas. However, now, there is not much difference between them.   Actually, even if students who would like to pass Tokyo University live on a remote island, it is possible to take a lecture by **eminent** teachers through the Internet.

Conclusively, as mentioned above, technology has changed education for the better for these reasons. It is possible to find a lot of information for a short period of time through the Internet, they could study effectively and equally have the chance to study.
(383 words)

Q1. **Could you tell me the downside of the technology**?

The advent of computers reduces the opportunities of communicating face to face because it's easier to send messages through emails or SNS. As a result, we sometimes misunderstand what others intend. We can easily guess what they'd like to say through their facial expression and tone of voice.

Q2. **Do you think the robotic technology will contribute to education?**   How about in other fields like in health care?

Yes, robots can encourage students to learn more. For example, the technology can be programmed to suit each individual need. Students who face mental disorders can be supported in the learning of communication and social skills even at home. Additionally, they can discover programming, science

technology or engineering by advanced robotic technology. Those skills possibly lead to their future success.
